The software allows users to create 2D and 3D drawings, and manages complex multilevel models. It is available as both a stand-alone program and as a module that can be integrated into AutoCAD or other products by third parties. It is one of the world's most popular CAD software tools. On January 26, 2017, Autodesk announced the release of AutoCAD 2018, AutoCAD LT 2018 and AutoCAD Architecture 2018, the last full-featured releases of AutoCAD before the product was purchased by Amazon on August 5, 2018. Contents show] History Edit AutoCAD was the first commercial, CADD program for personal computers, released in 1982. It was one of the first of many computers-aided drafting (CAD) products that would become commonplace. In 1984, the CAD giant began developing AutoCAD Architecture (aka ACAD), a program which aimed to simplify the use of CAD. This led to the acquisition of DesignJet, the publisher of the DesignJet line of desktop and portable CAD software. In August 1985, the combined company was known as Autodesk. AutoCAD Architecture 1.0 was released to manufacturing and architectural engineering firms in 1987. In the 1980s and 1990s, two "heavyweight" companies, CAD systems were marketing the first DTP programs. They were: 1982 -- Graphic Systems Corporation's 3DV developed by Vaddo (the name was changed to 3D Studio in 1987), the first 3D architectural visualization program, an early system used to model a conceptual building in the topology. The 2D version was also introduced. developed by Vaddo (the name was changed to 3D Studio in 1987), the first 3D architectural visualization program, an early system used to model a conceptual building in the topology. The 2D version was also introduced. 1983 -- Acrobat, a very advanced architectural design and engineering program, was designed by the firm of Paul Shevchenkov, and developed by Harsco VNU. Unrest among rivals Edit In the late 1980s and early 1990s, the CAD software market was growing steadily. Two years later, the industry peaked with over 30,000 CAD firms operating worldwide.[3] The market has since declined.[4] These software and hardware companies competed among themselves to be more attractive to architects, engineers, planners, contractors, real estate developers, and the building

A healthy diet should include lean meats, fish, vegetables, fruits, whole grains, nuts and legumes but is it possible to live without processed food, crisps and takeaway food? Healthy eating depends on avoiding nutrient-poor food choices and eating the right combinations of foods at the right time. But do we have to eat the same things every day? And what about a 'cheat meal' – a harmless indulgence, even if it's not entirely healthy? We often hear about healthy eating being all or nothing – eat only one type of food, and it should be the healthiest – but where is the balance in life? If you're concerned about the amount of saturated fat in your diet, you may be tempted to cut it out entirely. But the problem is, just because it's bad for you doesn't necessarily mean you can't enjoy it. Studies have shown a positive association between saturated fat and the overall mortality rate (although a different study found that it can have a negative association), while some cancers are linked with increased saturated fat intake. There are many other types of fat that could be worrying you. Monounsaturated fats are found in olive oil, peanuts and avocados and provide healthy fatty acids that may reduce cholesterol levels and protect against cardiovascular disease. Polyunsaturated fats are found in oily fish and, although more controversial, are being proposed as a protective factor against some types of cancer. Trans fats are created by partially hydrogenating oils, which makes them very stable and is why they were found to be associated with increased cardiovascular disease. But there are many foods that are high in saturated fat and low in other health-boosting nutrients. The type of food has an impact on the fat content. For example, milk and dairy products contain lots of saturated fat, yet there are many other good-quality food choices that are lower in saturated fat. If you🔹a1d647c40b
