Overview AutoCAD is a computer-aided design (CAD) application used for the drawing, drafting and design of technical and architectural projects, usually to an accuracy of 0.01 mm. The program is used for 2D and 3D modeling, design creation, drawing and drafting, part design, visualizing technical information, documentation and sharing. Supported file formats AutoCAD can create files in the following formats: DWG (AutoCAD Drawing) - native format DXF (AutoCAD Drawing Interchange Format) - import DGN (Graphical Metadata Language) - import JPG/JPEG/PNG/GIF/BMP (lossy) PDF/PS/EPS/TCP (lossy) TrueType/OpenType (handwriting) PostScript/PDF/EPS/JPEG (lossy) TIF/TIFF/GIF/PNG/BMP (lossy) Wavefront OBJ (3D) - import Realtime 3D (RT-3D) - import OpenSCAD 3D - import SCAD 3D - import STL (ascii, binary, scalable) XML (ascii, binary, scalable) Basic features Basic features in AutoCAD include the ability to create, edit, plot and view drawings and information, as well as perform some of the basic drafting and design functions. There are two main types of views in AutoCAD: Drafting and Design. Drafting In drafting mode, AutoCAD functions as a 2D CAD program. It has a 2D perspective view of the objects on the drawing. Objects can be manipulated by using AutoCAD's precise, user-friendly interface. This enables the designer to move, rotate, scale, and mirror the objects on the drawing, including wireframe and texture views, all with precise zoom controls. Design Design mode in AutoCAD is used to create, edit, analyze, and plot a design, and to view and navigate through all drawings. Design mode has three sub-modes, and in each one you can access different features. Model In the Model sub-mode, you can use the Draw tab and tools to draw, edit, and create your

Find out why they're finding success in attracting skilled professionals and then how IT organizations can adapt these new approaches to achieve greater success. So, what's behind this year's growth in IT job creation? Opportunities for remote and mobile-friendly work IT professionals are increasingly looking for flexibility in their work. According to the 2018 IT Trends and Forecast Report, 62% of employers report they've hired employees who were able to work remotely, whether that be in part or entirely. Likewise, 40% of respondents report that they've hired mobile-only employees. This year's survey also found that nearly three-quarters of employers want to hire more individuals with experience with remote work and mobile devices. What's more, hiring managers are expecting potential candidates to be able to work outside of their office and schedule shifts. Impressive growth in IT organizations The increase in hiring of remote and mobile employees may be a reflection of the fact that IT leaders are growing more comfortable with their teams working remotely. In fact, survey respondents reported an average of 19% growth in their organizations' IT staff over the last two years. A majority of hiring managers also reported that they've seen an increase in IT skills and competencies in their personnel, but when IT professionals become available for hire, they're in high demand, according to the report. This is primarily because talent shortages can negatively impact a company's day-to-day operations. Are these numbers what your organization is seeing, too? If so, you can use these figures as a baseline to improve your own hiring practices. Strong response rates and high levels of satisfaction Hiring managers report an above-average response rate to their IT jobs posting and are highly satisfied with the results. Overall, the survey showed that 69% of IT hiring managers responded to their postings and 74% were satisfied with the outcomes. This contrasts with a 2016 survey that showed a 28
