document using "spaces", and add text, lines, and symbols. ● You can connect to external data and map data with background processing. ● You can publish drawings to the Web, mobile apps, and the cloud. ● You can embed your drawings as HTML web pages, and export as a PDF. ● You can use AutoCAD to create presentations. ● You can synchronize the drawing with a compatible mobile or web app. ● You can add reference points ("bookmarks") to objects in the drawing. ● You can use AutoCAD to create 2D PDF files. ● You can use AutoCAD to create a PDF on the fly. ● You can change your settings (such as defaults, drawing scale, and precision) in real time. ● You can easily work with multiple drawings at once. ● You can customize how drawings are displayed and saved, using preferences. ● You can use other AutoCAD products, such as AutoCAD Architecture, AutoCAD MEP, AutoCAD

Mechanical, and AutoCAD Electrical, to design buildings and other structures. ● You can share drawings with other users in real time. History of AutoCAD AutoCAD was introduced in December 1982 as a commercial CAD application. The original name of the AutoCAD product was Drafting & Annotation System for Microcomputers. The first versions of the AutoCAD application used a minicomputer with a dedicated graphics terminal connected to a display and mouse. The first version of AutoCAD ran on the PDP-10 mainframe computer. The user interface was written in Assembler language. In the early 1990s, Autodesk introduced a new version of Auto

Android AutoCAD Integration: AutoCAD introduced a desktop version in February 2009, allowing users to install AutoCAD on

their Android devices and have an AutoCAD experience. AutoCAD LISP (AutoCAD native language) was created as a tool to access the AutoCAD API on Android. AutoCAD LT 2012 and AutoCAD LT 2013 have been optimized for Android. AutoCAD LT 2013 uses Android native database, allowing users to have a synchronization with a desktop version. AutoCAD LT 2012 and AutoCAD LT 2013 are licensed to only run on Android devices which are compatible with Android OS 4.0 (Ice Cream Sandwich) or higher. AutoCAD for mobile devices is an AutoCAD LT 2012, 2013 Android application. AutoCAD LT 2012 is bundled with all Android devices and AutoCAD LT 2013 has an App Market. An iPad version was released in August 2012. AutoCAD AutoLISP AutoLISP is a programming language created for AutoCAD. It is similar to VBA but has many additional features. AutoLISP is a

dynamic language and is designed to enable the developer to build their own extensions to the AutoCAD product. AutoLISP is popular with CAD operators because it is script-based and does not require large amounts of knowledge of the AutoCAD command structure. AutoLISP is available in the Autodesk Exchange apps store as a Developer Kit (AutoLISP.dll) or commercial version of the product. AutoLISP is a dynamic programming language that can extend the functionality of AutoCAD. Because it is designed to work with AutoCAD it is appropriate for users of AutoCAD regardless of whether they are CAD users or not. The following features are in the current version of AutoLISP: Ability to work with files Ability to work with formulas (curves and solids) Ability to work with tables Ability to work with modeling Can be accessed from any other AutoCAD product (not just AutoCAD LT)

Can be accessed from any other software with DLL support Allows the developer to have full control of the user interface Allows the developer to create their own software AutoLISP is a powerful language and can be used by non-CAD users to extend AutoCAD. This feature is called AutoLISP API integration. AutoLISP a1d647c40b
